

Carbon Footprint

Vertex has realigned many of its' services to be delivered remotely which has assisted with additional environmental benefits in the performance of the service including working towards net zero greenhouse gas emissions. Vertex In Health is committed to achieving Net Zero emissions by 2025.

Remote Work Enablement: Facilitating remote work capabilities has been a core part of Vertex organisation strategy and delivery for staff through secure virtual private networks (VPNs), cloud-based collaboration tools, and robust cybersecurity measures. This ensures essential Vertex services and operations can continue while minimising our carbon footprint through travel to premises. This is also applied to our clients using a range of tele solutions cloud based platforms allow us to deliver services remotely.

Our workflow solutions are designed to be 'paperless' and cloud based and we encourage clients to utilise this design to minimise carbon footprint all round.

Our training programmes can be done remotely and regular webinars for client training are all online. With this in place this cancels out all unnecessary travel again reducing our carbon footprint.
